

right to know that if they get hit down here walking across the street, they can go to the nearest emergency room; they won't have to be dragged to another borough to an emergency room because their plan says that. They have a right to know that if they get cancer or they're horribly scarred and they need a specialist to help them, they can get a specialist to deal with their problem. They have a right to know that if their employer changes health insurance carriers in the middle of a treatment—during a pregnancy, during a chemotherapy treatment, or whatever—they won't be required to change doctors. They have a right to know that their records will be private.

This is 160 million people. And we and our Republican friends in Washington are at direct loggerheads over this, something that affects 160 million people. That's the kind of thing this election is all about.

So what I want you to do is to know, number one, you have done a very good thing making this weekend possible, this event possible, because you are going to give us a chance to tell the people what putting people first means

in terms of 1998. But number two, I ask you to go back to your homes, go back to your friends and neighbors, and keep talking until you're blue in the face. Remember, our problem is not adversity; we will rise in adversity. Our problem is complacency. Our problem is the burden of history. Our problem is people thinking, "Things are good now; I don't have to move." We do have to move.

And if we talk about these big things and we remember these elections are never about us, they're always about those folks out on the street; they're always about what putting people first means; they're always about freedom and opportunity and reconciling Americans to each other across all the lines that divide us—if we do that, we're going to do just fine.

Thank you, and God bless you.

NOTE: The President spoke at 3:03 p.m. at a private residence. In his remarks, he referred to luncheon host Denise Rich; singers Patti LaBelle and Natalie Cole; and Steve Grossman, national chair, Democratic National Committee.

Statement on the Death of George C. Wallace *September 14, 1998*

Hillary and I offer our condolences to the family and friends of George Wallace. I remember working with him at the Governors' conference in 1983. Governor Wallace was wheelchair-bound and often in great pain, but he rolled into the committee room to provide the crucial vote that enabled the Governors to help save Federal support for disabled Americans unable to work.

Like the State he served as Governor and the region he represented as a candidate for President, George Wallace made a painful—but essential—journey, abandoning, in the end, the politics of division and embracing the politics of inclusion and reconciliation. For that, all Americans can be grateful.

Statement on Government Use of Recycled Products *September 14, 1998*

Today I am pleased to sign an Executive order strengthening Federal efforts to protect the environment and promote economic growth through the purchase of recycled and other environmentally preferable products.

As the Nation's largest paper purchaser, the Federal Government has a special responsibility to lead the way in building markets for recycled goods. Since 1993, when I signed an earlier Executive order to promote recycling, we have

quadrupled our purchase of recycled-content paper. Today we are going the next step. I am directing agencies to ensure that as of January 1 they purchase only recycled paper. Through this single action, we will save up to half a million trees a year, reduce air and water pollution, and curb emissions that contribute to global warming. We will also harness our tremendous purchasing power to spur the growing market for recycled products.

To further promote the use of environmentally preferable products, this "Greening the Government" Executive order also directs agencies to establish recycling targets, encourages them to purchase biobased and other "green"

products, and creates a White House task force to oversee Federal recycling efforts.

Recycling is one of America's great environmental success stories. Across the country, families and businesses each day demonstrate their commitment to our environment through the simple act of recycling. By redoubling our efforts to "green the Government," we are demonstrating once again that the environment and the economy go hand in hand, and helping to promote a more sustainable future for America.

NOTE: The Executive order is listed in Appendix D at the end of this volume.

Message to the Congress Transmitting a Report on Aeronautics and Space Activities

September 14, 1998

To the Congress of the United States:

I am pleased to transmit this report on the Nation's achievements in aeronautics and space during fiscal year (FY) 1997, as required under section 206 of the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2476). Aeronautics and space activities involved 13 contributing departments and agencies of the Federal Government, and the results of their ongoing research and development affect the Nation in many ways.

A wide variety of aeronautics and space developments took place during FY 1997. The National Aeronautics and Space Administration (NASA) successfully completed eight Space Shuttle flights. There were 23 successful U.S. Expendable Launch Vehicle (ELV) launches in FY 1997. Of those, 4 were NASA-managed missions, 2 were NASA-funded/Federal Aviation Administration (FAA)-licensed missions, 5 were Department of Defense-managed missions, and 12 were FAA-licensed commercial launches. The Mars Pathfinder spacecraft and Sojourner rover captured the public's attention with a very successful mission. Scientists also made some dra-

matic new discoveries in various space-related fields such as space science, Earth science and remote sensing, and life and microgravity science. In aeronautics, activities included work on high-speed research, advanced subsonic technology, and technologies designed to improve the safety and efficiency of our commercial airlines and air traffic control system.

Close international cooperation with Russia occurred on the Shuttle-Mir docking missions and on the International Space Station program. The United States also entered into new forms of cooperation with its partners in Europe, South America, and Asia.

Thus, FY 1997 was a very successful one for U.S. aeronautics and space program. Efforts in these areas have contributed significantly to the Nation's scientific and technical knowledge, international cooperation, a healthier environment, and a more competitive economy.

WILLIAM J. CLINTON

The White House,
September 14, 1998.
